V-Trimmer

CMN V-Trimmer (BAWI2500) - Your solution for gentle cutting of grass around poles, pickets, signboards, trees etc. without use of manual power.

The BAWI V-Trimmer is mounted sideways onto a tree-point-mounted frame, which can be combined with all types of tractors as well as other working machines. The three mower-heads are placed in a V- shape and are pulled by a hydraulic engine. To relieve the mower and the turning mechanics, the machine is equipped with a mechanical spring device, which equalizes the machines weight.

Mower-heads can cut with both knives and nylon cord.

The specially constructed mower-head is equipped with 2 steel-knives which cut the main part of the grass. They operate solemnly underneath crash barriers.

Nylon cord takes the remaining grass straw around the poles and can be mounted without tools.

The patented rotating system

The combination of the hydraulic rotating system, and the hydraulic motor, ensures that the poles and other obstacles are not damaged. The system is designed in a way that the cylinders don't pull more in the console than there is resistance from the knives.

The CMN V-Trimmer model BAWI 2500 is a professional machine which cuts 360° around poles and road signs without stop. The machine can reach underneath most crash barriers and road signs, due to the low ground clearance of the mower heads.

The rotating system of BAWI 2500 is activated hydraulically. That means, as soon as the sensor of the mowing heads meet a signpost, they will be activated.

The V-shaped cutting device will now rotate around the signpost.

As soon as the post is passed the V-Trimmer will move back to the start position.

With other words, do you want to get rid of the manual lawnmower and bad operating positions, you would need a CMN V-Trimmer.

Technical data for CMN V-Trimmer BAWI2500

Type	Working width / ground clearance in cm	Transport width + height in cm	weight in kg approx.	Fold up	Oil volume l/min
BAWI 2500	95/45	180/100	180	hydraulic	25-35
